~~50K~~ → 200K AED monthly revenue

It started with tracking, not ads.

The problem

Ads were running. Budget was being spent. But broken tracking meant Meta and Google were learning from bad data.

What we fixed first

1. Audited the Meta + Google Ads tracking
2. Rebuilt it in Google Tag Manager
3. Server-side tracking + Meta Conversions API

Then

4. Fixed signal loss and duplicate events

5. Rebuilt campaigns and scaled on clean data
